1. Purpose

This document defines the documentation and repository standards used throughout Project Fenix.

Its purpose is to ensure consistency, readability, maintainability, and professional engineering practices across the entire project.

2. Scope

These standards apply to every folder, document, diagram, script, and future module contained within the Project Fenix repository.

3. Guiding Principles

Project Fenix follows these principles:

- Documentation before implementation whenever practical.
- Consistency is preferred over personal preference.
- Every major decision should be documented.
- Documentation evolves together with the project.
- Simplicity is preferred over unnecessary complexity.

4. Project Standards

PF-STD-001

Every major folder shall contain a README.md

Each project folder must contain a README.md file explaining:

- Purpose
- Contents
- Status
- Related documents

PF-STD-002

Documentation shall use semantic versioning.

Example:

- v0.1.0
- v0.2.0
- v1.0.0

PF-STD-003

Every formal project document shall include:

- Title
- Document ID (if applicable)
- Version
- Status
- Author
- Purpose
- Related Documents
- Revision History

PF-STD-004

Commit messages shall be meaningful.

Examples:

- Initialize project structure
- Add Company documentation
- Update Production Process
- Create SQL database schema

Avoid messages like:

- Update
- Changes
- Test
- Stuff

PF-STD-005

Documentation shall be written in English.

English is the official documentation language of Project Fenix.

PF-STD-006

Project documentation shall be maintained within the Git repository.

All project documentation shall be stored inside the Project Fenix repository whenever practical, ensuring that documentation evolves together with the project.

5. Revision History

Version	Date	Description
1.0.0	2026-08-02	Initial documentation standards

6. Related

Applies to all folders and documentation within Project Fenix.
